

## Level IV Future City Project Update

On Saturday, January 26, five students from the Future City Project brought their model to Watertown Middle School for the New England Regional Future City Competition. This year's challenge was to “design a resilient power grid that can withstand and quickly recover from the impacts of a natural disaster.” Students in the project have been working on meeting the requirements of the competition since the beginning of the school year. This included building a model, writing an essay, creating a Virtual City and finally presenting the model to a panel of judges. They competed against 25 other New England schools and walked away with an award for “Best Education System”. The students who attended the competition did a fabulous job of presenting to the panel and answering questions all morning of other judges that stopped by to learn about our city. Congratulations to all who participated!
